

VADYM PLATANYI

Extensive experience in game development, with an academic background in AI (specializing in NLP) and Data Science. Currently expanding my expertise into Computer Vision and Robotics systems

WORK EXPERIENCE

Company: **Logivations**

Role: **Robotics Engineer**

Period: **Apr 2026 – Present**

Responsibilities:

Developed and optimized navigation behavior for mobile intralogistics robots (AMR).

Leveraged virtual simulation environments for systematic robotics system testing and validation.

Tech stack: **Python, C++, ROS2, Gazebo, RViz, Foxglove, Ubuntu, Docker, Git,**

Deepstream, NVIDIA Jetson, RealSense, Claude

Company: **Bloober Team SA**

Role: **Junior VFX Programmer**

Period: **Sep 2023 – Oct 2025**

Project: **Cronos: The New Dawn**

Responsibilities:

Developed complex transformation logic and visual triggers to synchronize game state with visual feedback. Optimized shaders and Niagara systems through profiling to reduce draw calls and improve performance. Bridged technical artists and core programmers to translate design requirements into scalable implementations. Identified and resolved integration bugs across UI, visual systems, and core gameplay.

Tech stack: **Unreal Engine 5, C++, Python, C#, TeamCity, Perforce**

Company: **Pixela Labs**

Role: **Junior Software Developer**

Period: **Oct 2022 – Aug 2023**

Responsibilities:

Built CI/CD pipelines in Python and Bash to automate internal workflows and reduce deployment errors. Developed stress-testing suites to validate system stability under high load. Integrated Unreal Engine with external data sources, managing data flow between local and cloud environments. Built an internal Python/Flask dashboard to visualize pipeline health and automation logs in real time.

Tech stack: **Unreal Engine 5, C++, Python, Flask, C#, Bash, Powershell, Git, Github**

Actions

Company: **Playwing Ukraine**

Role: **Junior C++ Game Developer**

Period: **Jun 2021 – Oct 2022**

Project: **Century: Age of Ashes**

Responsibilities:

Built end-to-end tutorial and post-match flow logic, managing user sessions and state transitions. Implemented seasonal event mechanics and visual feedback systems. Optimized code and visuals for last-gen console ports. Developed and maintained Node.js REST backend services for player communications, EGS account transaction processing, and player metadata. Reduced latency during peak post-match traffic through backend data-retrieval optimizations.

Tech stack: **Unreal Engine 5, C++, Python, C#, Perforce, Jenkins, NodeJs, Typescript, Azure, Playfab, EOS, Microsoft GDK**

City

Ukraine\Lviv

EDUCATION

sep 2019 - feb 2025

**Kharkiv National University of
Radio Electronics**

Master, Data Science
(Computer Science)

**Teck stack: C++, Python, C#, Scala, .Net,
Pandas, Numpy, SciPy, Scikit-Learn,
PyTorch, TensorFlow, OpenCV, SLAM,
Raspberry Pi, GNU/Linux**

SKILLS

- Game Development
- AI/Machine Learning
- Data Science
- Software Development
- Robotics Development

LANGUAGE

Ukrainian English
